SUMMARY

Computer Science student with experience in Python, Flask, and structured data processing. Skilled in problem-solving with a strong foundation in cybersecurity and backend systems. Passionate about AI, LLMs, Data handling etc.

SKILLS

Programming Languages: Python, C, Javascript **Backend & APIs:** Flask, Node.js, REST APIs, SQLAlchemy
Databases: MySQL, Relational databases **Cybersecurity & Risk:** OWASP Top 10, Secure Authentication, Encryption (RSA, AES), Networking concepts **Cloud & Tools:** Git, GitHub, Linux, Firebase **Frontend / App Dev:** HTML, CSS, Flutter. **System Administration:** Linux basics, Script basics **AI & ML:** Tensor flow, Mediapipe, Lstm, OpenCv, Numpy, Pandas

EDUCATION: B.Tech in Computer Science Engineering (2026), LBS College of Engineering, Kasaragod

INTERNSHIP EXPERIENCE

Cybersecurity Intern – InLighnX Global Pvt. Ltd. | May 2025

- Developed Python-based tools for structured data processing and analysis, similar to LLM output evaluation workflows (subdomain enumerator, password/SSH/FTP brute-force testers, and reverse shell).
- Performed security assessments aligned with OWASP Top 10 vulnerabilities.
- Worked in Linux environments with networking and APIs

Flutter Developer Intern – Maitexa Technologies | June 2025

- Designed and deployed Flutter applications.
- Integrated Firebase authentication for UI-backend interaction testing.

Cybersecurity Intern – Elevate Lab | July 2025

- Built a secure real-time messaging application using Flutter (frontend) and Node.js (backend).
 - Implemented end-to-end encryption using RSA for key exchange and AES for message security.
-

PROJECTS

Secure Chat Application (E2EE) | Python Flask, Node.js, Flutter

- Built a real-time chat system with end-to-end encryption using RSA and AES.
- Implemented socket-based communication using Node.js and Socket.IO.
- GitHub: <https://github.com/FARIZRAFI/securedchatapp>

Offensive Cybersecurity Toolset | Python

- Developed tools including subdomain enumerator, password/SSH/FTP brute-force testers, and an educational reverse shell.
- GitHub: <https://github.com/FARIZRAFI/offensive-cybersecurity-projects>

Canteen Management System | PHP, MySQL

- Developed backend logic for order processing, menu management, and billing workflows.
- Designed normalized database schemas and optimized SQL queries for performance.
- GitHub: https://github.com/FARIZRAFI/Canteen_management-miniproject

AI-Based Sign Language Detection System | Python Flask, TensorFlow, MediaPipe

- Built a backend-driven system to process real-time webcam frames for gesture recognition and ensures bilateral communication.
 - Integrated a trained LSTM model for American Sign Language (ASL) detection.
 - Github: <https://github.com/FARIZRAFI/gesturely-ai-sign-language>
-

ACHIVEMENTS

- District-level Winner – Young Innovators Programme 7.0 (₹25,000 prize)
 - EY Techathon 6.0 – Round 1 Qualified (Agentic AI for predictive maintenance).
-

CERTIFICATIONS

- Linux Fundamentals from Tcm security.
 - Mastercard Cybersecurity virtual experience program on Forage.
 - ANZ Australia Cybersecurity Management Job Simulation on Forage.
 - Tata Cybersecurity Security Analyst Job Simulation on Forage (IAM).
 - Complete Practical Course on Ethical Hacking, Penetration testing And Bug Bounty with live attacks 2025 from Udemy.
 - Introduction to Cloud Computing by Simplilearn.
-
